Air-cooled brine chiller is a type of cooling system that utilizes air as the cooling medium to cool down a brine solution. It is commonly used in industrial and commercial applications where a water source or water-based cooling system is not readily available or practical. The principle of an air-cooled brine chiller is similar to that of a water-cooled brine chiller, but instead of using water for heat dissipation, it relies on ambient air. The chiller unit consists of a compressor, condenser, evaporator, and expansion valve.
