The global Air-cooled General Server market size is predicted to grow from US\$ 76360 million in 2025 to US\$ 82020 million in 2032; it is expected to grow at a CAGR of 1.0% from 2026 to 2032.

General Purpose Server means a server used for general computing functions under end user control. It is a common server type that can meet the needs of most applications. Generally speaking, its structure is relatively complex and has the characteristics of high performance and high applicability.

Air-cooled genera servers transfer the heat emitted by the CPU to the radiator block through the radiator, and then blow the hot air away through the fan. Therefore, air conditioning is needed to cool down the environment.

Servers are the foundation of business computing environments, providing compute power and storage for everything from cloud solutions and AI to applications, email, media, web content, and much more. General purpose server is a common server type with a relatively complex structure. It has the characteristics of high performance and high applicability, and can meet the needs of most applications.

At present, the general purpose servers on the market are mainly air-cooled servers.

Cloud computing big data centers, 5G infrastructure, industrial Internet, etc., provide new opportunities for the future development of the air-cooled general purpose sever industry. The increase in downstream demand will drive the continued growth of the air-cooled general purpose server market.

Large data centers and telecom network service providers are growing day by day, and the demand for massive data processing and storage is rising, which is the key driving force for the growth of air-cooled general purpose server.

Raw material costs account for a very high proportion in the general purpose server industry, and fluctuations in raw material prices will have a significant impact on the industry.

The technical barriers of general purpose server are relatively high, the existing market is relatively mature, and many manufacturers are well-known, which restricts new entrants from entering the industry. Moreover, since many server manufacturers have established loyal cooperative relationships with existing general purpose server suppliers, it is difficult for new entrants to develop the market.
