An Air Cooled Heater is a type of heating device that utilizes the circulation of air to dissipate the heat generated by the heating element, as opposed to using a liquid coolant like water or oil. These heaters are commonly found in both industrial and residential applications where a compact, efficient, and low-maintenance heating solution is required. They operate by drawing in cool air, passing it over the heating element to absorb heat, and then exhausting the warmed air into the surroundings or directing it to a specific area.

The global Air Cooled Heater market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
