The air-cooled refrigerated cooked food display cabinet is a special type of refrigeration equipment specially designed for displaying and preserving cooked food, chilled fresh food, etc. The air-cooled refrigerated cooked food display cabinet is a display cabinet that uses air cooling technology to achieve refrigeration and preservation functions. It combines refrigeration technology and display functions, which can not only ensure the freshness and safety of food, but also attract customers' attention and promote sales. The working principle of the air-cooled refrigerated cooked food display cabinet is similar to that of an air conditioner, but it is more focused on refrigeration and preservation. It is equipped with a finned evaporator and an air duct circulation component. Driven by a fan motor, the cold air cooled by the evaporator is blown into the interior of the display cabinet to form an up-and-down circulation airflow. This circulation method allows the cold air to be evenly distributed in every corner of the display cabinet, thereby achieving the effect of rapid cooling and uniform refrigeration.

The global Air-cooled Refrigerated Cooked Food Display Cabinet market size is projected to grow from US\$ 11020 million in 2024 to US\$ 14320 million in 2030; it is expected to grow at a CAGR of 4.5% from 2024 to 2030.
