Air cooled low-pressure air compressor is an air compressor that uses a fan to dissipate heat, typically used in industrial applications with lower pressure requirements. Compared with water-cooled air compressors, air-cooled low-pressure air compressors do not require an external water source, but achieve cooling through air flow. They are usually smaller in size and suitable for use in places with limited space or difficult access to water sources. Air enters the interior of the air compressor through a fan, taking away the heat generated during the compression process and maintaining the normal operating temperature of the equipment. This type of air compressor is commonly used in applications that require low to moderate pressure, such as pneumatic tools, light machinery, or small production equipment that requires precise pressure control.In 2024, global Air-Cooling Low-Pressure Air Compressor production reached approximately 216 K units , with an average global market price of around US$ 13322 per unit.

United States market for Air-Cooling Low-Pressure Air Compressor is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
