The global Air Energy Heat Pump market size is predicted to grow from US$ 2685 million in 2025 to US$ 6168 million in 2031; it is expected to grow at a CAGR of 14.9% from 2025 to 2031.

Air energy heat pump, also known as air source heat pump, is a device that uses the heat in the air to generate heat energy. Its working principle is based on the 'reverse Carnot' principle. It works through the operation of the compressor system, absorbing the heat in the air to produce hot water or provide heating and cooling needs, while completing these requirements with the least energy consumption.

As global requirements for environmental protection and energy conservation increase, the market size of air energy heat pumps continues to grow. Especially in Europe, North America and other regions, air energy heat pumps have become one of the main heating methods. The market size of ultra-low temperature air energy heat pumps is also expanding, and it is expected to maintain a steady growth trend in the next few years. The market size of China's air energy heat pumps is also expanding year by year. The support of government policies and consumers' demand for environmentally friendly and energy-saving products have promoted the rapid development of the market. With the continuous advancement of technology and the reduction of costs, the penetration rate of air energy heat pumps in the Chinese market will continue to increase, and the market size will further expand.
