An air fed suit is a type of protective clothing that provides a continuous supply of clean, breathable air to the wearer. This is typically used in environments where there is a risk of exposure to harmful airborne contaminants, such as in chemical plants, pharmaceutical facilities, or hazardous waste cleanup sites. The suit is equipped with a built-in air supply system that delivers fresh air to the wearer through a hose connected to a clean air source. This helps to ensure that the wearer is protected from inhaling any dangerous substances present in the air, allowing them to work safely in potentially hazardous environments.
