The global Air Flotation Sedimentation Machine market size is predicted to grow from US$ 510 million in 2025 to US$ 624 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

The flotation and sedimentation integrated machine is a wastewater treatment equipment that integrates flotation and sedimentation treatment functions. It mainly removes suspended matter and pollutants such as grease in the water through flotation technology, and then separates solids and liquids through a sedimentation tank. The flotation system injects fine bubbles into the wastewater to make suspended particles and oil and other substances float to the water surface to form a scum layer, and then the remaining solid matter in the water is precipitated through a sedimentation tank, thereby effectively improving the purification effect of the wastewater. This equipment is widely used in industrial wastewater treatment, urban sewage treatment and water purification.
