The global Air Hydraulic Booster Cylinders market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Air Hydraulic Booster Cylinder is an improved design that combines the advantages of the cylinder and the cylinder. The hydraulic oil is strictly isolated from the compressed air. The piston rod in the red contacts the working part and automatically departs. The action speed is faster and is higher than the air pressure. It has stable transmission, simple cylinder body device, easy output adjustment, can achieve high output of hydraulic press under the same conditions, low energy consumption, soft landing without damaging the mold, easy installation, and special turbocharged cylinder can be installed at any angle of 360 degrees, occupying small space, with few faults and no problem of temperature rise, long service life, low noise, and other core characteristics.

United States market for Air Hydraulic Booster Cylinders is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
