Air knife is a metal tube with an inlet to allow for the connection of an air source, and a long, continuous slit to provide a high velocity and high impact air stream. It is a tool used to blow off liquid or debris from products as they travel on conveyors. Air knives are normally used in manufacturing or as the first step in a recursive recycling process to separate lighter or smaller particles from other components for use in later or subsequent steps, post manufacturing parts drying and conveyor cleaning, part of component cleaning. The knife consists of a high-intensity, uniform sheet of laminar airflow sometimes known as streamline flow.

Air Knife Systems utilize compressed air for industrial applications that include drying, removing excess oils and liquids, dust blow off, and cooling. Though they have many different applications, common uses are removing dust, industrial debris and liquids typically found following a wash, rinse or product filling operation.
