An Air Moisture Absorber is a device or product designed to reduce indoor humidity by absorbing excess moisture from the air. These hygroscopic agents typically contain a variety of hygroscopic materials, such as silica gel, calcium chloride or activated carbon, which effectively absorb and retain moisture, preventing it from being released back into the air. Air Moisture Absorbers are often used in high-humidity environments such as damp basements, closets, bathrooms, or other enclosed spaces to prevent problems caused by mold, musty odors, and moisture, and to protect indoor items from the effects of moisture. They come in a variety of formats, including desiccant packs, dehumidification bags and containers with moisture-absorbing crystals or granules.

The global Air Moisture Absorber market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
