An air and oil separator is used to extract oil from scavenged air before sending it to an intake manifold. Air oil separators may vary according to capacity and removal efficiency. An air oil separator plays a vital role as residual oil in the compressed air may negatively impact various processes, such as distribution network or pneumatic controls and production equipment. High efficiency air oil separators conserve lubricating oil and eliminate air pollution.

The global Air Oil Separator market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Increasing regulations concerning the discharge of atmospheric pollutants are expected to be key drivers for the growth of the air oil separator market across the globe. The rising demand for effective means of removing oil particles from the discharged air is also fueling the demand for air oil separators. Growing need of oil separators in the automotive industry to separate oil from the vapor is also expected to propel the demand for air oil separators over the forecast period. Rising demand for better fuel efficiency in marine and aircraft industries is anticipated to boost the demand for air oil separators. Developing industrial sectors, such as food processing, beverage, chemical and pharmaceutical and oil and gas, especially in emerging countries are estimated to drive the demand for air oil separators in the coming years. An air oil separator's operational life depends on usage, maintenance and environmental conditions; hence, the aftermarket segment for air oil separators is expected to drive the market with a significant growth rate.
