An Air Permeability Tester is a device used to measure the air permeability of materials. It is commonly used in the textile industry to determine the porosity of fabrics, but it can also be used for other materials such as paper, plastic films, and leather. The tester works by using a constant pressure differential across the test material and measuring the air flow rate through it. The resulting airflow value is then used to calculate the air permeability of the material, which is an important measure of its breathability and overall quality.
