Air Permeable fabrics are permeable conveyor belts used in pneumatic conveying systems to transport bulk materials in powder or granular form. These fabrics have a specialized design that allows air to pass through, creating an air-supported layer that helps in the smooth and efficient movement of materials. On the other hand, Air Permeable fabrics are used in industrial applications to facilitate the controlled aeration and fluidization of powdered materials in silos, hoppers, or containers. These fabrics promote the even flow and discharge of powders by introducing air from below, preventing issues like bridging and clogging. Air Permeable Fabrics play crucial roles in material handling and processing industries.

The global Air Permeable Fabric market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
