The global Air Purification Disinfection Device market size is predicted to grow from US\$ 10090 million in 2025 to US\$ 16770 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

An air disinfection machine can remove germs from the air and nonporous surfaces. Using UV-C radiation, these tools are effective at destroying the protein coating of viruses, which leads to their inactivation.

The market is expected to be driven by rising airborne diseases and rising pollution levels in urban areas. Furthermore, rising health awareness, rising living standards, and increasing disposable income are expected to drive market growth. Due to the lockdown measures imposed by governments in response to the outbreak of the COVID-19 pandemic in 2020, sales of home appliances such as air purifiers, cleaning appliances, kitchen appliances, and water filtration equipment have increased. Rising health awareness is driving the sales of air purifiers across the world. Certain patients require a sterile environment, and there is also an increased need for this equipment at home or during nursing care.
