Air Starter Units (ASU) are used in the aviation industry to provide compressed air to start aircraft engines.

They are portable, self-contained units equipped with an air compressor, reservoir, and control systems. ASUs can be trailer-mounted or installed on trucks, and they are commonly used in situations where the aircraft's onboard APU (auxiliary power unit) is not available or when an external air supply is required. ASUs deliver high-pressure air to the aircraft's engine, allowing it to start the combustion process. These units are typically used for aircraft with gas turbine engines, enabling a reliable and efficient method for initiating engine start-up.
