The global Air Starting System market size is predicted to grow from US$ 491 million in 2025 to US$ 710 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

An air starting system is a mechanism used to start large diesel or gas engines, particularly in marine, industrial, and power generation applications, by utilizing compressed air. Instead of relying on an electric starter motor, the system injects compressed air directly into the engine cylinders, creating the necessary pressure to turn the engine over and initiate the combustion process. This method is especially effective for engines that are too large for electric starters, offering reliable and powerful starting capabilities even in harsh conditions. The system typically includes components such as air compressors, air reservoirs, starting valves, and piping to deliver and control the air supply efficiently.

United States market for Air Starting System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Air Starting System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Air Starting System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Air Starting System players cover Caterpillar, Ingersoll Rand, Rheinmetall, Honeywell, Guinalt, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
