The air port; the fan is connected to the air inlet for inflating the air bag; the air outlet is connected to the fan for completing air circulation. The air suspension bed has air inlets and air outlets at both ends of the air bag, which allows hot air or cold air to quickly enter and be discharged quickly, thereby increasing the heating and cooling speed of the air bag.

Air suspension bed is also called air mattress. The invention of the air bed was one of the advances in the burn profession. The mattress of the air bed is filled with a large

number of ceramic balls, and the air pressed in from the air compressor circulates among the balls. Provide patient comfort by regulating the temperature and flow rate of the air. The patient seems to be floating in the air current, and it is easy to turn the position, which prevents the wound on the back from compressing, becoming moist, lysing the infection, and preventing the occurrence of bedsores. After using this bed, due to the constant high temperature condition, the consumption of the patient can be reduced, which is beneficial to the recovery of the patient.
