The air suspension solenoid valve is one of the important components used to control the vehicle's air suspension system. The air suspension system adjusts the vehicle's suspension height and stiffness to provide a smoother ride and a more comfortable ride. The solenoid valve adjusts the air pressure of the air bag or gas spring in the suspension system by controlling the flow of air pressure, thereby changing the vehicle's height and suspension hardness. This adjustment can be adjusted in real time according to driving conditions and passenger preferences, improving driving comfort and stability.
