Air-to-air refueling probe, also known as refueling probe or probe for short, is a device installed on the aircraft. When the tanker and the tanker are in flight, it can receive fuel from the tanker. The probe extends from the receiving aircraft and contacts the hose connected to the tanker, thus allowing fuel to flow from the tanker to the receiver. It enables the aircraft to fly farther and stay in the air for a longer time, which is crucial for reconnaissance, surveillance and combat operations.
