The global Air Traffic Management System for Civil Aviation market size is predicted to grow from US$ 4135 million in 2025 to US$ 17010 million in 2032; it is expected to grow at a CAGR of 22.8% from 2026 to 2032.

Air Traffic Management (ATM) System for Civil Aviation is an integrated set of technologies, procedures, and services designed to ensure the safe, orderly, and efficient movement of aircraft within civil airspace. It encompasses all operational functions that manage air traffic from departure to arrival, maintaining separation between aircraft while optimizing airspace capacity and flight efficiency. The system is composed of three primary components: Air Traffic Control (ATC), which provides tactical control and separation; Air Traffic Flow Management (ATFM), which regulates airspace and airport capacity to prevent congestion; and Airspace Management (ASM), which organizes and allocates airspace structures based on demand and traffic flow. Modern ATM systems integrate communication, navigation, and surveillance (CNS) technologies—such as radar, ADS-B, GNSS, and digital data links—with advanced automation and decision-support tools that enhance situational awareness and enable collaborative decision-making among controllers, pilots, and airspace managers.

United States market for Air Traffic Management System for Civil Aviation is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
