According to our LPI (LP Information) latest study, the global Air Transportation market size was valued at US\$ million in 2023. With growing demand in downstream market, the Air Transportation is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Air Transportation market. Air Transportation are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Air Transportation. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Air Transportation market.

The air transportation industry uses aircraft, such as airplanes and helicopters to provide air transportation services of passengers and/or cargo. It includes services offered by both scheduled and nonscheduled air carriers, however, scenic and sightseeing air transportation and air courier services are not included under the air transportation industry.

Global airlines are focusing on alternate streams of revenue to increase revenues and profit margins. This is mainly due to increasing competition in the air transportation industry as airlines are cutting ticket prices owing to decline in aircraft turbine fuel costs, thus having a negative impact on profit margins. In this regard, an important alternate revenue generating stream for air carriers is the sales of ancillary products and services

across their value chain. Ancillary products and services include pre-checking of baggage, booking preferred seats, excess baggage and Wi-Fi connectivity.
