The global Air Velocity Sensors market size is predicted to grow from US\$ 470 million in 2025 to US\$ 759 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

An anemometer is a device used to measure the velocity and flow rate of air or gas, applicable to pipelines, open environments, or closed systems. Its working principles include thermal, mechanical, ultrasonic, and differential pressure methods, and it is widely used in HVAC, industrial process control, environmental monitoring, automotive air management, and laboratory equipment to ensure stable airflow, safe operation, and energy efficiency. The anemometer industry chain encompasses upstream sensing elements, electronic components, housing materials, calibration instruments, and signal processing modules; midstream sensor manufacturing, assembly, calibration, and quality inspection; and downstream applications include HVAC equipment manufacturers, industrial automation systems, building management systems, environmental monitoring engineering, automotive air management systems, and research institutions. Related supporting services include system integration, installation and commissioning, calibration services, and after-sales maintenance. In 2025, global anemometer production was approximately 8,727,000 units, with a global average market price of approximately US\$55 per unit. The gross profit margin of major companies in the industry ranged from 35% to 55%. In 2025, global anemometer production capacity was approximately 11,636,000 units.

The Air Velocity Sensor market is supported by continuous growth in HVAC, smart buildings, and industrial automation. Stricter energy efficiency regulations and indoor air quality standards are increasing sensor adoption. Technological advances improve accuracy, durability, and digital integration, enabling broader use in intelligent control systems. As demand for environmental monitoring and automation expands, air velocity sensors are expected to see steady growth driven by infrastructure upgrades and smart

system deployment.
