The global Airbag Control Modules market size is predicted to grow from US\$ 8746 million in 2025 to US\$ 15036 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

In 2025, global Airbag Control Module output reached about 500 million units and global capacity of around 750 million units. The average price is about USD 18 per unit, with gross margins near 26%. An airbag control module (ACM) is a critical automotive electronic unit that detects collisions and triggers airbag deployment by processing data from crash sensors, accelerometers, and sometimes gyroscopes in real time, ensuring airbags inflate within milliseconds to protect occupants; it also records crash data for diagnostics. The supply chain for ACMs is highly specialized and global, beginning with raw semiconductor materials and electronic components (such as microcontrollers, MEMS sensors, and capacitors) supplied by chip manufacturers, followed by Tier 2 and Tier 1 automotive suppliers who design and assemble the modules into safety systems, which are then integrated by automakers (OEMs) into vehicles during production; the chain is tightly regulated for safety compliance (e.g., ISO 26262), requires rigorous testing and redundancy, and is sensitive to disruptions in semiconductor supply, logistics, and quality control due to the safety-critical nature of the product.

United States market for Airbag Control Modules is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Airbag Control Modules is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
