The global Airband Radio Scanner market size is predicted to grow from US\$ 76.30 million in 2025 to US\$ 103 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

In 2025, global Airband Radio Scanner production reached approximately 520 K units, with an average global market price of around 150 US\$/unit.

An Airband Radio Scanner is a receive-only radio device used to monitor aviation communication signals, mainly within the civil VHF airband frequency range of 118-137 MHz, and in some models also military aviation, weather, marine, emergency, or general wideband communication bands. It is commonly used by aviation enthusiasts, ground service personnel, airshow organizers, training users, pilots as a backup listening tool, and airport-related observers to receive AM voice communications between aircraft, air traffic control, ground control, tower, approach, and other aviation service channels. Unlike aviation transceivers, an airband radio scanner is generally designed for listening and scanning multiple preset frequencies rather than transmitting.

Demand for Airband Radio Scanners is supported by the stable base of aviation enthusiasts, pilot training users, airport ground observers, airshow operations, aviation education, and radio hobby communities. The market opportunity is increasingly concentrated in compact handheld scanners, multi-band portable receivers, digital display models, rechargeable USB-C devices, and wideband scanners that combine airband, VHF/UHF, weather, marine, and emergency channels in one unit. Mature markets such as North America, Europe, and Japan favor reliable branded scanners with better sensitivity and channel memory, while emerging markets create opportunities for lower-cost Chinese portable airband receivers. However, growth is

limited by online ATC audio platforms, ADS-B flight tracking apps, radio-use restrictions in some regions, and long replacement cycles, so suppliers mainly compete through reception quality, portability, battery life, ease of programming, and broader frequency coverage.
