Airborne Laser Methane Telemetry Detector (ALMTD) is a laser gas detection device installed on aircraft or unmanned aerial vehicles, specifically designed for long-distance detection and location of methane leaks. It emits laser beams of a specific wavelength and detects the reflected signals after the laser interacts with methane molecules, thereby achieving precise measurement of methane concentration in the air. This instrument can quickly scan large areas and is applicable in scenarios such as pipeline inspection, environmental monitoring, and greenhouse gas emission assessment. It can help detect leakage points in a timely manner, reduce the impact of methane on the environment, and lower associated risks.
