Aircraft Accident Reconstruction Service is a specialized technical service that rebuilds the sequence of events and underlying causal factors of an aviation accident or serious incident by integrating physical evidence, recorded data, operational records, and analytical modeling. It typically involves documenting and mapping wreckage and impact signatures, examining structures and systems for failure modes, recovering and interpreting flight recorder and avionics data where available, reviewing maintenance and operational history, and using performance, trajectory, and human factors analysis to recreate how the aircraft and crew responded over time. The outcome is a defensible reconstruction that supports safety improvement, regulatory and insurance decision making, and when required, litigation-ready conclusions supported by traceable evidence and transparent assumptions.
