According to our LPI (LP Information) latest study, the global Aircraft Actuator market size was valued at US\$ million in 2023. With growing demand in downstream market, the Aircraft Actuator is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Aircraft Actuator market. Aircraft Actuator are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Aircraft Actuator. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Aircraft Actuator market.

An increasing trend to adopt the more electric aircraft (MEA) concept has resulted in an increasing number of electronic components replacing the traditional mechanical or hydraulic components. This has resulted in an increased power requirement for electronic components, further increasing the demand for power generation systems and would be the major driver for the growth of the aircraft actuator market.

Among all the electronic components types, converters accounted for the largest market share in 2017 and the market for the same is estimated to grow at the highest CAGR between 2018 and 2025. Due to the emergence of the more electrical aircraft concept, the requirement of electricity generation and distribution in aircraft would increase significantly; this would give rise to the associated components market including converters.
