Aircraft alternators are the source of electrical power in an aircraft. In comparison to airplane generators, airplane alternators have a much smoother electrical output and can be brought to a higher speed much more quickly. Aircraft alternators require battery power to stimulate a magnetic field and provide current throughout the airplane's engine. While the primary responsibility of the battery is to start the airplane engine, an aircraft alternator's primary responsibilities are to supply electrical power to all vital equipment on the airplane and to recharge the battery.
