According to our LPI (LP Information) latest study, the global Aircraft Arresting System market size was valued at US\$ 730.6 million in 2023. With growing demand in downstream market, the Aircraft Arresting System is forecast to a readjusted size of US\$ 944.3 million by 2030 with a CAGR of 3.7% during review period.

The research report highlights the growth potential of the global Aircraft Arresting System market. Aircraft Arresting System are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Aircraft Arresting System. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Aircraft Arresting System market.

Aircraft Arresting System is a mechanical system used to rapidly decelerate an aircraft as it lands. Typical systems consist of several steel wire ropes laid across the aircraft landing area, designed to be caught by an aircraft's tailhook. During a normal arrestment, the tailhook engages the wire and the aircraft's kinetic energy is transferred to hydraulic damping systems attached below the carrier deck. There are other related systems which use nets to catch aircraft wings or landing gear. These barricade and barrier systems are only used for emergency arrestments for aircraft without operable tailhooks

Among types, the Engineered Material Arresting System (EMAS) segment is projected to grow at the highest CAGR during the forecast period; the cable segment is projected

to lead the market during the forecast period. Factors such as mandatory installation of EMAS at airports having runway safety length less than 1,000 feet and increasing spending on runway safety measures are expected to drive the market.
