The global Aircraft Cabin Heaters market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Commercial airplanes are designed with a heating system that warms the cabin to provide a comfortable environment for passengers. When an airplane begins to ascend, its heating system will typically engage. It will expel warm air out the vents and into the cabin, thereby raising the cabin temperature. Airplanes, however, don’t use the same type of heating system as cars, trucks and other roadworthy vehicles. Rather, they are designed a special type of heating system.

According to the IATA, the total volume of air passenger traffic in 2022 increased by 64.4% compared to 2021. Global passenger traffic for the whole year was 68.5% of pre-pandemic (2019) levels. Total global aviation revenue grew by 43.6% to $727 billion in 2022. In 2022, global airlines were expected to have a net loss of $6.9 billion, significantly better than the net loss of $42 billion in 2021 and $137.7 billion in 2020. According to data from the Civil Aviation Administration of China, in 2022, the cumulative operating income of the entire industry was 632.89 billion yuan, down 15.8% from the previous year. The loss was 217.44 billion yuan. Among them, airlines achieved operating income of 336.48 billion yuan, and the loss was 177.12 billion yuan. The airport achieved operating income of 77.01 billion yuan and the loss was 47.62 billion yuan.
