The global Aircraft Condition Monitoring Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The Aircraft Condition Monitoring System (ACMS) is a modern airborne data collection and processing system. The system can collect the required airborne system data in real time and transmit the collected data to the ground station in real time by means of measurement and control or satellite communication. Then, the ground station analyzes the data and distributes the results to the corresponding personnel for judgment, so as to realize the condition monitoring, fault diagnosis and positioning of the airborne system, and provide a basis for the decision-making of the ground personnel.

According to the IATA, the total volume of air passenger traffic in 2022 increased by 64.4% compared to 2021. Global passenger traffic for the whole year was 68.5% of pre-pandemic (2019) levels. Total global aviation revenue grew by 43.6% to \$727 billion in 2022. In 2022, global airlines were expected to have a net loss of \$6.9 billion, significantly better than the net loss of \$42 billion in 2021 and \$137.7 billion in 2020. According to data from the Civil Aviation Administration of China, in 2022, the cumulative operating income of the entire industry was 632.89 billion yuan, down 15.8% from the previous year. The loss was 217.44 billion yuan. Among them, airlines achieved operating income of 336.48 billion yuan, and the loss was 177.12 billion yuan. The airport achieved operating income of 77.01 billion yuan and the loss was 47.62 billion yuan.
