The global Aircraft Deicing Truck market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

De-icing trucks at airports are specialised vehicles equipped with large tanks that contain de-icing fluids such as glycol. They are used to remove snow, ice and frost from the exterior of aircraft before takeoff. During cold weather, ice can accumulate on the wings, tail and fuselage of an aircraft, which can interfere with the aerodynamics of the plane and potentially cause it to crash. To prevent this from happening, de-icing trucks spray a mixture of water and de-icing fluid on to the aircraft's surface, breaking up and removing the ice.

United States market for Aircraft Deicing Truck is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
