The increase in carbon emissions due to the increase in passenger traffic is the main reason for the increase in demand for electric aircraft. Government agencies are ensuring transportation safety and solving various problems related to air transportation, such as carbon emissions and noise pollution. Policymakers are calling for all short-haul flights to be electrified. The electrification of the propulsion system is expected to increase take-off and climb power, thereby providing a highly efficient alternative to conventional turbofans. Increasing electric propulsion is expected to significantly reduce fuel combustion and thereby reduce atmospheric emissions.
