The global Aircraft Engine Overhaul market size is predicted to grow from US$ 3758 million in 2025 to US$ 5121 million in 2031; it is expected to grow at a CAGR of 5.3% from 2025 to 2031.

During use, aircraft engines experience a variety of complex working environments and high-intensity operations, which may cause wear, aging or damage to engine components. When the engine has problems such as performance degradation, increased vibration, reduced fuel efficiency, or when the scheduled maintenance cycle is reached, an overhaul is required. Overhaul is an important part of preventive maintenance measures, which helps to detect and repair potential problems in a timely manner, prevent small problems from turning into major failures, and thus affect flight safety and operational efficiency.
