Seals are used in aircraft to prevent leakage of fluids, prevent air and dust to enter into aircraft's structure, and provide protection against harsh environmental conditions. Seals are characterized by various functions including aerodynamics, fire resistance, conduction, insulation, and air and fluid handling. Extruded seals are made by the extrusion process which is used to make seals of fixed cross-sectional profile by forcing a material preferably elastomers through a die. This process is used to make complex cross-sections with smooth surface shining.
