The report requires updating with new data and is sent in 48 hours after order is placed.

Fly-by-wire (FBW) is a system that replaces the conventional manual flight controls of an aircraft with an electronic interface. The movements of flight controls are converted to electronic signals transmitted by wires (hence the fly-by-wire term), and flight control computers determine how to move the actuators at each control surface to provide the ordered response. It can use mechanical flight control backup systems (Boeing 777) or use fully fly-by-wire controls.

The global Aircraft Fly-by-wire System market size is projected to grow from US\$ 7224.5 million in 2023 to US\$ 11800 million in 2030; it is expected to grow at a CAGR of 7.3% from 2024 to 2030.
