The global Aircraft Gears market size is predicted to grow from US\$ 369 million in 2025 to US\$ 518 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Aircraft carry a variety of large and small gearboxes with approximately one thousand gear wheels distributing the high-speed rotational movement generated by aircraft engines to mechanisms located throughout the airframe. Each of these gears has been engineered to improve its toughness and weight.

The market for aircraft gear is anticipated to develop in the future due to government backing. The general expansion of the air travel sector is being impacted by increasing government initiatives to increase public awareness of the industry. For instance, the Russian government intended to invest RUB237 billion (\$3.1 billion) in March 2023 to assist the automated industry in maintaining and growing regional aviation in the Arctic. The program will be used for projects that will construct aircraft in 2023 and protect and reserve small-scale aviation in the Arctic region. Additionally, the Russian government declared in June 2022 that it would invest over \$14 billion in the aviation sector by the end of this decade with the goal of increasing local aircraft production. By 2030, the goal is for 81% of Russian Airlines' fleet to be made in the country. Thus, it is anticipated that government backing will aid in the growth of the aircraft gear industry. Thus, driving the aircraft gears market revenue.
