The global Aircraft Interface Devices market size is predicted to grow from US\$ 258 million in 2025 to US\$ 509 million in 2031; it is expected to grow at a CAGR of 12.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Innovations in communication technology, airports, flight decks, and cabins, along with flexible and worldwide air and ground networks, drive aviation information technology. Aviation information technology solution providers are coming up with advanced devices, such as electronic flight bag (EFB) and in-flight entertainment (IFE), which enhance the connectivity in aircraft to achieve unprecedented efficiency, convenience, and safety across the aerospace industry. The integration of these advanced devices requires a compatible aircraft interface device (AID) that will protect avionics data from corruption and unauthorized interference and solve problems in avionics system.

Based on connectivity, the wireless segment is anticipated to witness a higher growth, owing to the ease and low investment for installation of wireless devices.
