The global Aircraft Interior Design Services market size is predicted to grow from US\$ 2575 million in 2025 to US\$ 3458 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Aircraft interior design services refer to professional services that systematically design and integrate the interior environment of aircraft cabins and crew spaces. These services encompass multiple aspects, including seat layout, space planning, lighting systems, ergonomics, and material selection, while simultaneously meeting stringent aviation safety certifications and airworthiness regulations. This type of service not only emphasizes aesthetics and passenger experience but also must consider lightweight design, functionality, durability, and operational efficiency, making it a crucial interdisciplinary field connecting industrial design, aerospace engineering, and user experience.

With the recovery and growth of global air transport demand, and the shift in airline competition from 'capacity competition' to 'experience competition,' the importance of aircraft interior design services has significantly increased. Airlines are upgrading cabin designs to enhance brand differentiation and passenger satisfaction. Meanwhile, lightweight materials, sustainable design, and intelligent cabins have become core development directions in the industry. Coupled with the continued release of demand for refurbishment of older fleets, interior design services are expanding beyond new aircraft manufacturing into the existing market. Therefore, this industry will continue to benefit from the recovery of the aviation industry, technological innovation, and the growth in demand for premium and personalized products, exhibiting a stable and long-term growth trend.
