Aircraft propeller is a part of the aircraft propulsion system which provides the thrust essential for the aircraft to move in the air. Aircraft propeller consists of two or more blades connected together by a hub. The blades of aircraft propeller are in the shape of an airfoil. When engine rotates the blades of aircraft propeller system produce lift, also known as thrust. This thrust enables the aircraft to move forward.

opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Aircraft Propeller Systems.

The global Aircraft Propeller Systems market size is projected to grow from US\$ 200.5 million in 2022 to US\$ 274 million in 2029; it is expected to grow at a CAGR of 274 from 2023 to 2029.

Increase in demand for light-weight and fuel-efficient aircraft in the recent years and also for special light-sport aircraft (SLSA) are estimated to drive the aircraft propeller system market in the next few years. Extensive efforts have been made by researchers and technologists to improve the design of the blades used in the aircraft propeller system and to increase the efficiency of the system in order to reduce the consumption of fuel. Rise in demand for turboprop engine aircraft for military, civil, and commercial applications in the recent years is anticipated to promote the growth of the aircraft propeller system market during the forecast period. However, the manufacturing cost of aircraft propeller system and the maintenance cost of turboprop engine aircraft are high. Another drawback is that the light-sport aircraft (LSA) provides seating space for no more than two people. Efficiency of turboprop engine aircraft declines at high altitude. Furthermore, stringent regulations and norms have been imposed on the design of the blades used in the aircraft propeller system in order to ensure safe operations. These drawbacks are anticipated to hinder the growth of the aircraft propeller system market in the near future.
