The market has gained considerable traction in recent years due to the increased use of these brake discs on aircraft. The use of aircraft carbon brake discs has been gaining momentum over the years due to their rapid use in glide, takeoff and landing of military and commercial aircraft. The sales volume of aircraft carbon brake discs has surged unprecedentedly, and has become an important part used in aircraft takeoff, landing, maneuvering, stopping and landing. The high-carbon brake disc rotors are certified to ensure flight safety and are a consumable part like releasing the brakes. Aircraft carbon brake discs are an advanced technology in braking devices. Compared with enhanced carbon brake discs and steel brake discs, it is believed that aircraft carbon brake discs are lighter and have better heat dissipation performance. Also, it does not degrade the energy absorbing properties at high temperatures. Hence, directional control of aircraft during ground operations is an important aspect of the aviation industry and the market for aircraft carbon brake discs is likely to witness significant growth over the forecast period.
