Seals are materials or parts that prevent fluid or solid particles from leaking between adjacent joint surfaces and prevent foreign impurities such as dust and moisture from intruding into parts of machinery and equipment.

Aircraft seals refer to seals used in aircraft manufacturing. Aircraft seals have extremely strict product requirements and are subject to special spacecraft standards. This report studies the aircraft seal market, including various seal products used in the production and manufacturing of commercial small aircraft, medium passenger aircraft, large passenger aircraft, and military aircraft.

Seals can be divided into two categories: static sealing between relatively static joint surfaces and dynamic sealing between relatively moving joint surfaces. Seals are one of the most widely used parts in mechanical products. Aircraft seals include general-purpose seal products and aircraft-specific customized seal products.
