The hotter section of an aero-engine and other high-temperature, high-pressure applications of the aircraft, require extremely precise and proprietary designed specialty clamps with a proper selection of right materials to provide high strength and toughness under very arduous environments. With the advent of advanced aero-engines getting compact and hotter, there has been a tremendous demand generated for high-temperature materials and components with a high-strength-to-weight ratio. This has led aeroengine OEMs and aircraft OEMs to look for customized clamps accommodating all the requirements and providing higher performance and lasting longer for their extremely critical and specific applications. Thus, even though a little more expensive, there has been a high demand for specialty clamps for high-temperature applications in the aircraft industry over the years.
