The global Aircraft Steel Brake System market size is predicted to grow from US\$ 571 million in 2025 to US\$ 738 million in 2031; it is expected to grow at a CAGR of 4.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The braking systems for these aircraft are designed with multiple sets of stationary steel discs (stators) sandwiched between copper or bronze rotors which rotate with the wheel. Hydraulic pressure applied to the stack of stators and rotors compresses the plates together, creating a large frictional force which brakes the aircraft.

According to the IATA, the total volume of air passenger traffic in 2022 increased by 64.4% compared to 2021. Global passenger traffic for the whole year was 68.5% of pre-pandemic (2019) levels. Total global aviation revenue grew by 43.6% to \$727 billion in 2022. In 2022, global airlines were expected to have a net loss of \$6.9 billion, significantly better than the net loss of \$42 billion in 2021 and \$137.7 billion in 2020. According to data from the Civil Aviation Administration of China, in 2022, the cumulative operating income of the entire industry was 632.89 billion yuan, down 15.8% from the previous year. The loss was 217.44 billion yuan. Among them, airlines achieved operating income of 336.48 billion yuan, and the loss was 177.12 billion yuan. The airport achieved operating income of 77.01 billion yuan and the loss was 47.62 billion yuan.
