Turning is a machining process used to obtain highly finished cylindrical parts with the help of single point cutting tools. Through turning, both solid, as well as thin-walled cylindrical parts, can be formed. Some of the specific turning operations are hard turning, spherical generation, tapered turning, facing, grooving, and parting. Critical landing gear and aero-engine components, such as lock actuators, piston & cylinder actuators, axles, shock absorbers, engine shafts, thrust links, rotor masts, pressure vessel components, bearing carriers, and small forgings; are some of the key aircraft parts made through the turning process.
