Airflow Mattress is a specialized medical mattress designed to prevent and manage pressure ulcers, commonly known as bedsores, by redistributing pressure and promoting air circulation around the patient's body. These mattresses use air-filled cells or chambers that can be static or dynamically inflated and deflated to periodically change pressure points and enhance blood flow. Some models also incorporate low-air-loss technology, which provides a continuous flow of air to help manage moisture and regulate the skin's temperature. Airflow mattresses are used in various healthcare settings, including hospitals, long-term care facilities, and home care, to support patients with limited mobility or those at high risk of developing pressure ulcers.
