The global Airgel Insulation Board market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Airgel insulation board, also known as aerogel insulation board, is a type of thermal insulation material that utilizes a highly porous and lightweight material called aerogel. Aerogel is often referred to as 'frozen smoke' due to its extremely low density and high porosity. Airgel insulation boards are made by impregnating a silica-based aerogel into a fibrous matrix, such as fiberglass or cellulose fibers, and then compressing it into a rigid board form. The result is a lightweight, low-density board with exceptional thermal insulation properties. Aerogels have extremely low thermal conductivity, which means they are highly effective at reducing heat transfer. Airgel insulation boards provide excellent insulation by minimizing heat flow through conduction, convection, and radiation. This makes them ideal for applications where high thermal resistance is required, such as in building insulation, HVAC systems, industrial equipment, and aerospace technologies.

United States market for Airgel Insulation Board is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Airgel Insulation Board is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
