The global Airline Reservation System Solution market size is predicted to grow from US\$ 4457 million in 2025 to US\$ 7474 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

Airline reservation systems are core information platforms used by airlines to manage flight inventory, seat allocation, fare rules, passenger bookings, e-tickets, payment settlements, customer data, revenue management, and flight operation information. These systems can process booking requests in real time from airline websites, mobile applications, call centers, online travel agencies (OTAs), global distribution systems (GDS), travel agents, and third-party partners, enabling flight inquiries, seat reservations, changes and refunds, ancillary service sales, and passenger service management. Modern airline reservation systems are typically deeply integrated with passenger service systems (PSS), revenue management systems (RMS), customer relationship management systems (CRM), airport departure systems (DCS), loyalty program systems, and payment platforms, forming the core infrastructure for airlines' digital operations and revenue management.

With the continued recovery of the global air passenger market, the growth in demand for digital travel, and airlines' shift towards retail operations, the airline reservation system market has maintained steady growth. The NDC and ONE Order standards promoted by the International Air Transport Association (IATA) are changing traditional ticket sales models, enabling airlines to directly offer personalized products and dynamic pricing services to passengers. Meanwhile, the application of cloud computing, artificial intelligence, big data analytics, machine learning, and open API technologies is driving the evolution of reservation systems from traditional mainframe architectures to cloud-native platforms, improving system scalability and real-time processing

capabilities. In the future, with the expansion of low-cost airlines, the growth of the global tourism industry, the widespread adoption of mobile bookings, and the increasing proportion of ancillary revenue, airline reservation systems will further develop towards intelligence, platformization, and real-time retailization, becoming a crucial support for the digital transformation of the aviation industry.
