The global Airliner Brake market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

An airliner brake is a braking system used on commercial aircraft to slow down and stop the aircraft during landing and taxiing. It is a critical component of the aircraft's landing gear system.

Airliner brakes are typically hydraulic systems that use hydraulic pressure to engage and disengage the brakes. When the pilot applies pressure to the brake pedals in the cockpit, hydraulic fluid is sent to the brake units located on the main landing gear wheels. The brake units then apply pressure to the brake discs, which are attached to the wheels, causing friction and slowing down the rotation of the wheels.

The braking force generated by the airliner brakes is crucial for safely bringing the aircraft to a stop after landing. The brakes must be able to handle the high speeds and heavy weights of commercial aircraft, as well as the heat generated during braking. Therefore, airliner brakes are designed to be highly durable and capable of dissipating heat efficiently to prevent overheating.

In addition to the main brakes, airliners also have auxiliary brakes, such as spoilers and thrust reversers, which assist in decelerating the aircraft during landing. Spoilers are panels on the wings that can be raised to disrupt the airflow and create drag, while thrust reversers redirect the engine's thrust forward, aiding in braking.

United States market for Airliner Brake is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Airliner Brake is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Airliner Brake is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

Global key Airliner Brake players cover Safran Landing Systems, Valcor Engineering, Honeywell, TAE Aerospace, Nasco Aircraft Brake, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2024.
